GE Vernova

Hiring Team — Senior Project Manager (m/w/d) - Critical Infrastructure Communications

Dear Hiring Team,

The Senior Project Manager role for Critical Infrastructure Communications at GE Vernova stands out as a natural intersection of my 20+ years securing and scaling complex, distributed technology systems and your mission to deliver resilient, secure grids. My track record of turning technically demanding, multi-million-euro network transformations into board-ready business value—exactly the accountability your major responsibilities demand—compels me to apply.

At Colt Technology Services, I drive enterprise-scale Network & Cybersecurity transformations across the DACH region, orchestrating Sales, Product, Delivery, and partners like Fortinet, Zscaler, Cisco, and Palo Alto into winning proposals. I built tools like C-BIQ, which prices cyber risk in euros for board-level decisions, and the ELECTRONIC LLM platform, which automates recon, risk quantification, and executive reporting—streamlining project controls and customer communication. These experiences translate directly to managing a portfolio of 6-8 active EPC/turnkey projects, leveraging your focus on contract execution, financial KPIs, and customer satisfaction from transfer to PAC.

GE Vernova's focus on secure, flexible networks for energy and critical infrastructure aligns with my career spent securing telecom, defense, and enterprise environments. The requirement to lead project execution, manage risk, and support commercial teams through Variation Orders mirrors my daily work advising CIOs/CISOs and turning technical scope into margin and growth. I would welcome the chance to discuss how this background can help deliver resilient grid communications for your customers.

I would welcome the opportunity to discuss how my experience maps to your needs. Thank you for your time and consideration.

Sincerely,

Jev Vainsteins
